

Digital farming

Student Perspective

Matt Notley

Tocal Agricultural College

Lecturer Precision Agronomy

So how do we get there

- Needs to be intuitive
 - Netflix, there wasn't a Precision Netflix advisors going from town to town to setup Netflix

NETFLIX

- What do we already do, why not adapt that?
- Re-invent the wheel- Or apply KISS?

What should I upskill in?

- What's relevant to my skill set
- What's just Hype
- Now to five years
- Five years plus?
- What level of training meets Farm workers, managers and advisors.

Realising and Achieving Value

Can I be a better farmer now?

What's the starting point

- Where do I go to receive functional training that's in the paddock & applied?
- How do I know what I'm being trained in is relevant
- Are there industry standards I should follow

Support – delivering successful training

- There's a need to link resources- funding, hardware & equipment to keep training modern and relevant
- Give people a reason to attend (is there value in coming to training?)

Training- What's best

- Accredited versus Non- accredited (Vocational)
- Identifying levels and responsibilities for training courses
 - entry level to advisors?

Are we achieving results

- Trust, is training meeting industry targets -reality and expectations of Data capture and use
 - paddock, to management, to retail, to finance, to research
- Swimming carnival
