

AUSTRALIAN FARM INSTITUTE

MEDIA RELEASE

24 October 2017

Australian agriculture should go 'off the grid' to avoid energy crisis

Australian agriculture should go 'off the grid' and develop its own energy sources, according to pioneering energy farmer, renewable resource advocate and the Director of Meralli Projects, David Mailler.

"The Federal Government fluff about trying to solve problems today that require a long-term sustainable solution," Mr Mailler said. "Frankly it leaves rural and regional Australia out in the cold, literally."

"Rural Australia is left with no other option but to come up with their own solution, as their energy needs are once again being left without investment," he said.

David Mailler will be featured in the program for the Australian Farm Institute's Roundtable Conference session on energy. David has been instrumental in establishing Meralli Projects; currently constructing the largest privately-funded, unsubsidised solar farm of its type in the world.

Technological change has led to an increase in the economic potential for farm businesses to be significant generators of energy. To capture the full benefit of that potential, partnerships between energy infrastructure providers, large energy companies and farm businesses need to be formed. The current and ongoing uncertainty surrounding energy policy is a barrier to the development of those partnerships.

The new National Energy Guarantee plans to scrap subsidies and incentives for renewable energy production, placing the responsibility for meeting obligations under the Paris Agreement on electricity retailers. So where does this leave the Australian farmer that may be looking to invest in significant on-farm generation of electricity?

Other speakers in the session include Matt Brand, the Chief Executive Officer of NSW Farmers, and Gavin McMahon, the Chief Executive Officer of Central Irrigation Trust and a Director of Central Irrigation Pty Ltd.

Matt will be discussing the current energy policy debate and the impact it is having on farmers and agribusiness, while Gavin will talk about how agricultural businesses can best partner with each other to find solutions for high energy costs.

The Australian Farm Institute's Roundtable Conference will be held at the International Convention Centre - Sydney on the 9th and 10th of November. Get in touch with the Institute via www.farminstitute.org.au or for further details or contact the office directly.
